How to - Configure Heroku to forward logs to EventTracker EventTracker v9.3 and above

Publication Date: February 22, 2021

Abstract

This guide helps you in configuring **Heroku** with EventTracker to receive **Heroku** events. In this guide, you will find the detailed procedures required for monitoring **Heroku**.

Scope

The configuration details in this guide are consistent with EventTracker version v9.3 or above and Heroku.

Audience

Administrators, who are assigned the task to monitor and manage Heroku events using EventTracker.

Netsurion. EventTracker

1. Overview

Heroku is a container-based cloud Platform as a Service (PaaS) that is used to build, deploy, manage, and scale modern applications. Heroku Enterprise provides services to large companies which help them to improve collaboration among different teams. It provides a set of features like fine-grained access controls, identity federation, and private spaces to manage their enterprise application development process, resources, and users.

This guide helps you in configuring **Heroku** with EventTracker to receive **Heroku** events. Once Heroku is configured to send logs to EventTracker, EventTracker's knowledge pack will help in monitoring events from **Heroku**.

EventTracker's knowledge pack consists of dashboard (graphical representation of events), alerts (near realtime notification of important events), saved searches (for searching specific category of logs with a single click) and reports (structured and details info of events) to help you correct problems long before a disastrous failure occurs.

EventTracker's built-in knowledge pack enables you to gather business intelligence providing increased security, performance, availability, and reliability of your systems.

2. Prerequisites

- EventTracker v9.3 or above should be installed.
- Heroku should be configured.
- Heroku Command Line Interface (CLI) must be installed.

3. Integrating Heroku with EventTracker

3.1 EventTracker uses syslog drain to receive logs from Heroku.

- 1. Create an app in Heroku.
- 2. Login to Heroku CLI.
- 3. Turn on debug and runtime logging.
 - Turn on debug logging:
 - \$ heroku config:add LOG_LEVEL=DEBUG --app <YOUR_APP_NAME>
 - Turn on runtime logging:
 - \$ heroku labs:enable log-runtime-metrics --app <YOUR_APP_NAME>
- 4. Restart your app to apply changes:

Netsurion. EventTracker

• **Restart your app**:

- \$ heroku restart -- app <YOUR_APP_NAME>
- 5. Using command line, add syslog URL (which contains the host and port) as a syslog drain.

| TLS Syslog |
|--|
| <pre>\$ heroku drains:add syslog+tls://logs.example.com:12345 -a myapp</pre> |
| Plain text Syslog |
| <pre>\$ heroku drains:add syslog://logs.example.com -a myapp</pre> |

Figure 1

Here, myapp = the name of your Heroku application

e.g. heroku drains:add syslog://<EventTracker Manager IP>:<port> --app <YOUR APP NAME>

EventTracker will receive events/logs of applications for which syslog drain has been created.

3.2 System Licensing

1. Click on Manager under Admin.

| | | 🔎 Admin - |
|------------------------|-----------------------------|--|
| Active Watch Lists | FAQ Tile Configuration | MITRE ATT&CK Rules |
| Alerts | Group Management | 🧭 Parsing Rules |
| Casebook Configuration | Q IP Lookup Configuration | Report Settings |
| ● Category | · . Knowledge Objects | Systems |
| Diagnostics | M Machine Learning Jobs | Q Users |
| Event Filters | 🗞 Machine Learning Settings | T Weights |
| Eventvault | Manager | |

2. Go to syslog/Virual Collection Point tab.
