

Actionable Security Intelligence

Integrate Microsoft Antimalware

EventTracker v8.x and above

Abstract

This guide provides instructions to configure **Microsoft Antimalware** to send logs to EventTracker Enterprise. Once logs are being configured to send to EventTracker Manager, alerts and reports can be configured into EventTracker.

Scope

The configurations detailed in this guide are consistent with **EventTracker Enterprise** version 8.x and later, and **Microsoft Antimalware**.

Audience

Administrators who are responsible for monitoring **Microsoft Antimalware** which are running using EventTracker Manager.

The information contained in this document represents the current view of EventTracker. on the issues discussed as of the date of publication. Overview

Microsoft Antimalware is an antivirus software (AV) product that fights malware (malicious software), including computer viruses, spyware, Trojan horses and rootkits. The software runs on Windows XP, Windows Vista and Windows 7. Built upon the same virus definitions and scanning engine as other Microsoft antivirus products, Microsoft Antimalware Service provides real-time protection, constantly monitoring activities on the computer and scanning new files as they are downloaded or created and disable detected threats.

EventTracker integrates Microsoft Antimalware and provides reports, knowledge objects and dashboards for all generated events including attacks, configuration changes etc. EventTracker will also monitor antivirus sensors and process execution statuses for all workstations in the network.

Prerequisites

- EventTracker v8.x should be installed.
- You must have a valid and active Azure subscription account to use the Microsoft antimalware for Azure features and deploy antimalware for your cloud services and or virtual machines.
- The Microsoft Antimalware solution is supported on Windows Server 2008 R2, Windows Server 2012, and Windows Server 2012 R2 operating system families.
- The VM agent is required to run the Microsoft antimalware extension on the virtual machine. Make sure VM agent is enabled on the VM.

Integration of MS Antimalware events to EventTracker server

Once you deploy the Azure portal, follow the below steps to enable the logging.

- 1) In the Recommendations blade, select **Enable data collection for subscriptions**. This opens the **Turn on data collection** blade.

The screenshot displays two windows side-by-side. The left window is titled 'Recommendations' and lists several security tasks with their descriptions, resources, states, and severities. The right window is titled 'Turn on data collection' and shows a single subscription entry.

DESCRIPTION	RESOURCE	STATE	SEVERITY	...
Enable data collection for subscriptions	1 subscriptions	Open	! High	...
Enable Network Security Groups on subn...	5 subnets	Open	! High	...
Enable Auditing on SQL servers	3 SQL Servers	Open	! High	...
Enable Auditing on SQL databases	3 SQL databa...	Open	! High	...
Enable Transparent Data Encryption	3 SQL databa...	Open	! High	...
Apply disk encryption	6 virtual mac...	Open	! High	...
Provide security contact details	1 subscriptions	Open	! Medium	...

SUBSCRIPTION	STATE	SEVERITY	...
Visual Studio Ultimate with MSDN	Open	! High	...

Figure 1

- 2) On the **Turn on data collection** blade, select your subscription. The Security policy blade for that subscription opens.
- 3) On the **Security policy** blade, select ‘On’ under Data collection to automatically collect logs. Turning on data collection provisions the monitoring extension on all current and new supported VMs in the subscription.
- 4) Select **Save**.
- 5) Select **OK**.
- 6) Also, please ensure that in the VM the security extensions need to be enabled during the creation of a VM as shown below.
- 7) These are Virtual machine environments, so once enabled the extension, events will be shown in the Event Viewer.

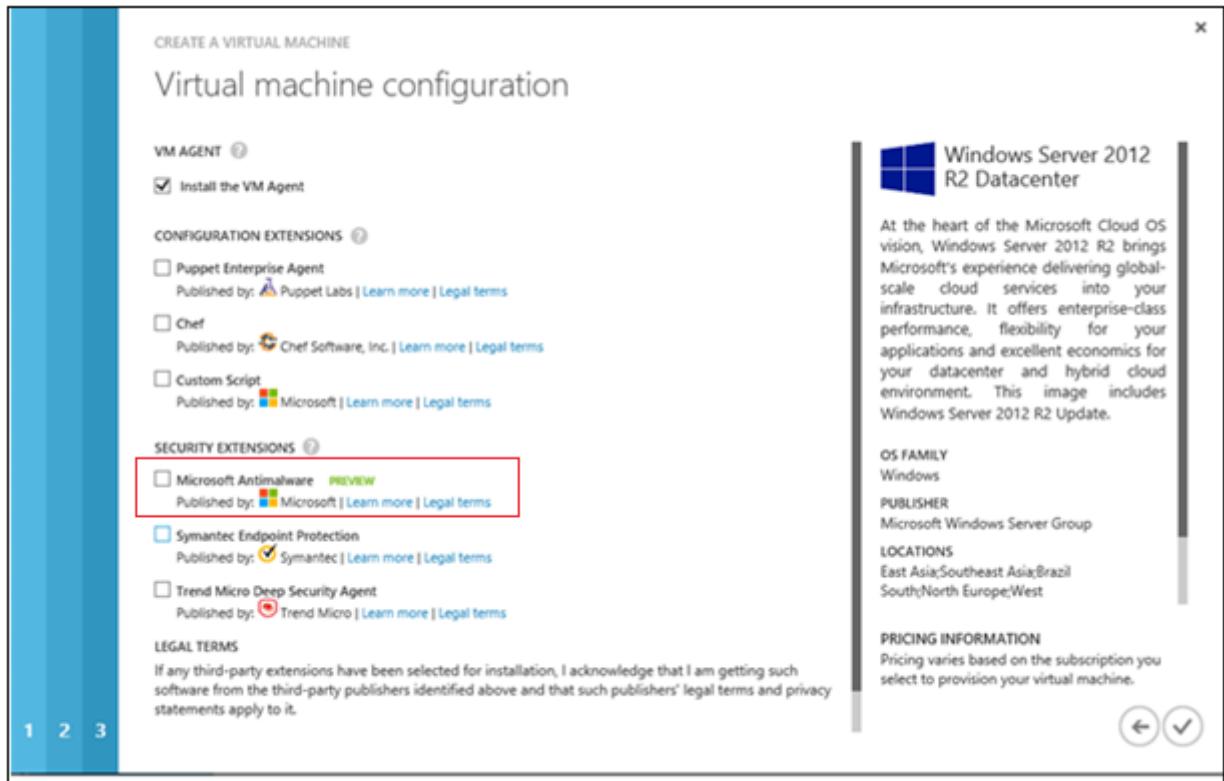

Figure 2

EventTracker Knowledge Pack

Once logs are received into EventTracker, Categories, Reports can be configured into EventTracker.

The following Knowledge Packs are available in EventTracker Enterprise to support Windows.

Alerts

- MS Antimalware-Action taken against malware activity:** This alert is generated when an action is taken against the detected malware.
- MS Antimalware-Detected malware activity:** This alert is generated when any malware activity is detected.
- MS Antimalware-Quarantined malware restored:** This alert is generated when a quarantined malware is restored.
- MS Antimalware-Removed history of malware:** This alert is generated when the malware history is removed or deleted.

Flex Reports

- MS Antimalware-Action taken against malware activity-** This report provides details about all the action taken against malware activities.

Import MS Antimalware knowledge pack into EventTracker

NOTE: Import knowledge pack items in the following sequence:

- Knowledge Objects
- Alerts
- Flex Reports
- Parsing Rule

NOTE: Export knowledge pack items in the following sequence:

- Knowledge Objects
- Alerts
- Flex Reports
- Parsing rule

1. Launch **EventTracker Control Panel**.
2. Double click **Export Import Utility**.

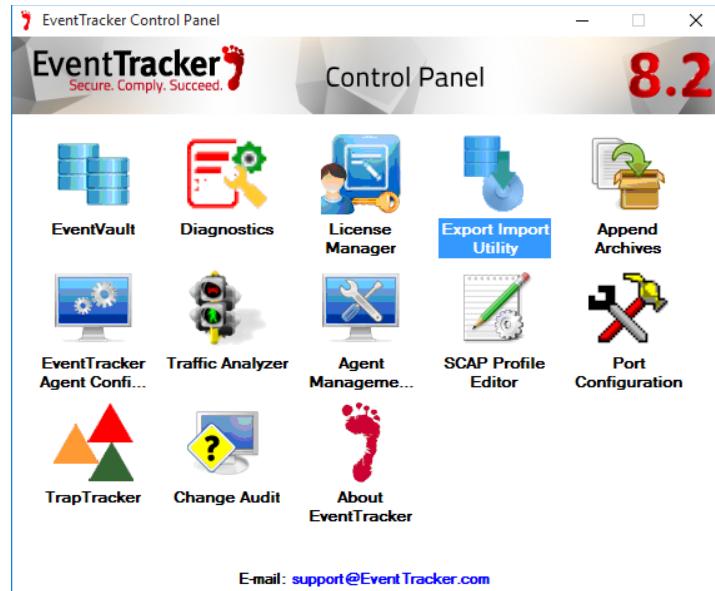

Figure 3

3. Click the **Import** tab.

Alerts

1. Click **Alerts** option, and then click the browse button.
2. Locate the **MS Antimalware alerts.isalt** file, and then click the **Open** button.

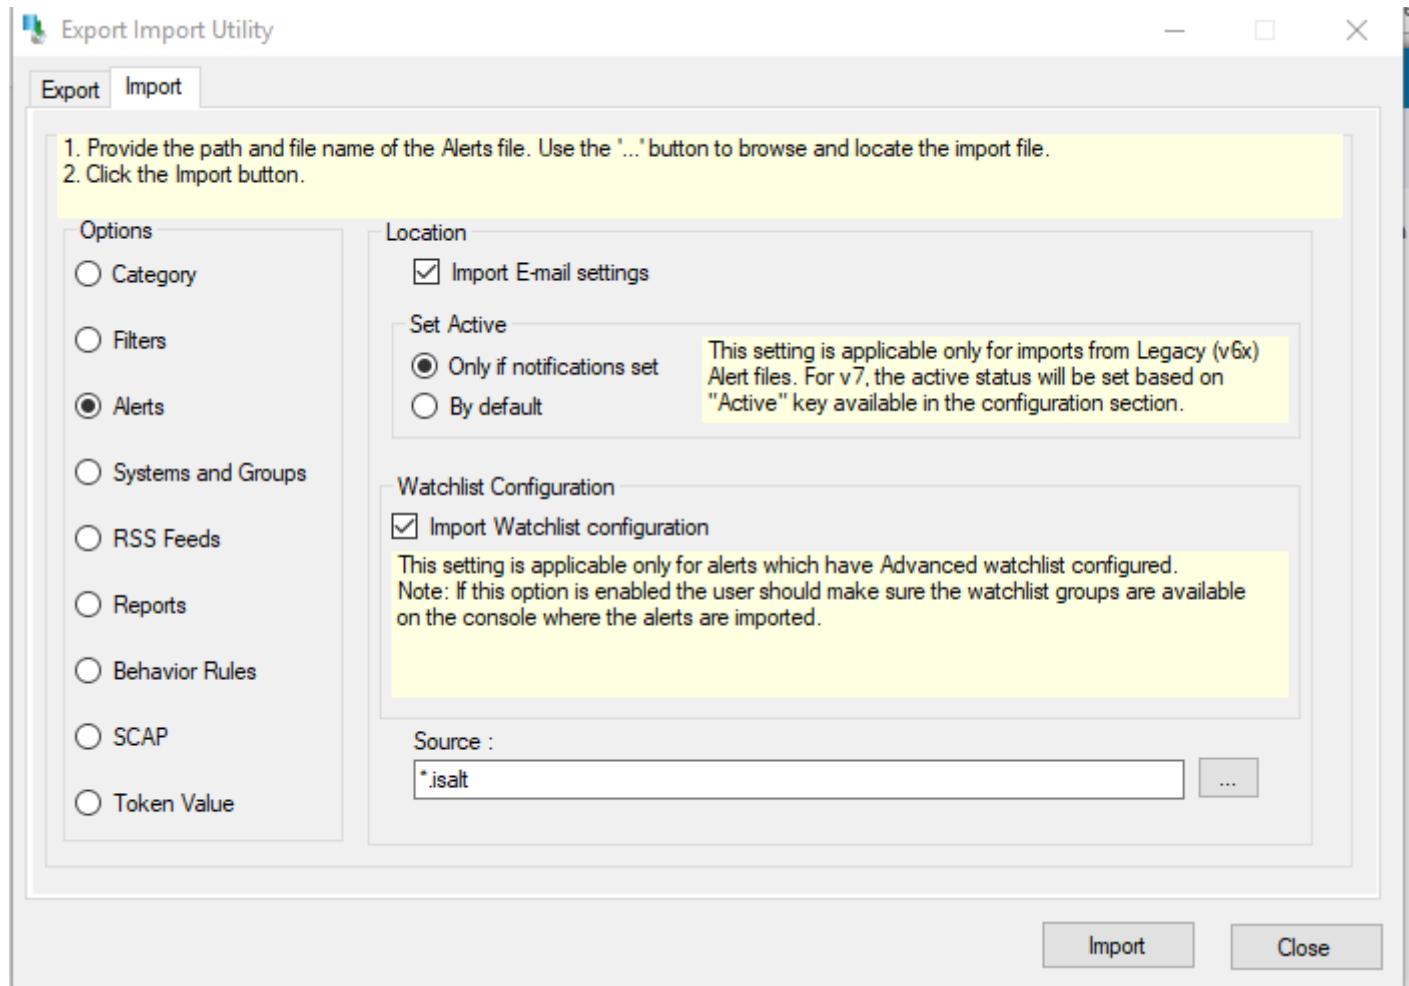

Figure 4

- To import alerts, click the **Import** button.

EventTracker displays success message.

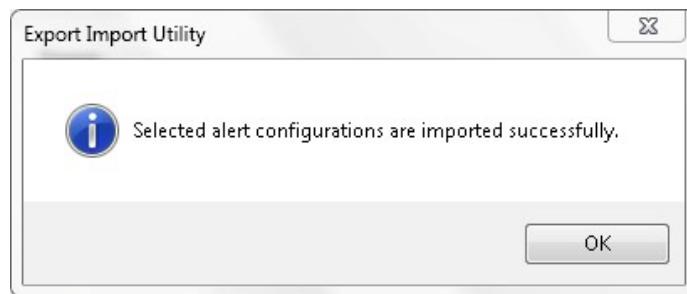

Figure 5

- Click **OK**, and then click the **Close** button.

Knowledge Objects

- Click **Knowledge objects** under Admin option in the EventTracker manager page.

The screenshot shows the EventTracker manager interface. At the top, there's a navigation bar with links for Dashboard, Incidents, Behavior, Search, Reports, My EventTracker, Change Audit, and Config. The Config link is currently active, as indicated by a blue background. A dropdown menu for 'Admin' is open, listing various configuration options: Active Watch Lists, Alerts, Behavior Rules, Behavior Settings, Category, Event Filters, EventVault, IP Lookup Configuration, Knowledge Objects (which is highlighted with a red box), Logbook Configuration, Manager, Parsing Rules, Report Settings, RSS, Systems, Users, Weights, and Windows Agent Config. Below the menu, there are sections for NEWS and ANNOUNCEMENTS, both of which are currently empty. On the right side, there's a sidebar with a gear icon and some text about a browser.

Figure 6

- Locate the **MS Antimalware knowledge objects.etko**, and then click **Import** button

The screenshot shows a web browser window titled 'EventTracker :: Knowledge Objects Import/Export - Google Chrome'. The URL is 'localhost:8080/EventTracker/Prism_Admin/KnowledgeObject/KO_Import.aspx?action=im'. The main content area is a form titled 'IMPORT'. It has a 'Select file' input field with a 'Choose File' button, which currently says 'No file chosen'. To the right of the input field is a 'UPLOAD' button. The rest of the page is a large, empty gray area.

Figure 7

- Choose the Knowledge objects that needs to be imported and click on **upload**.

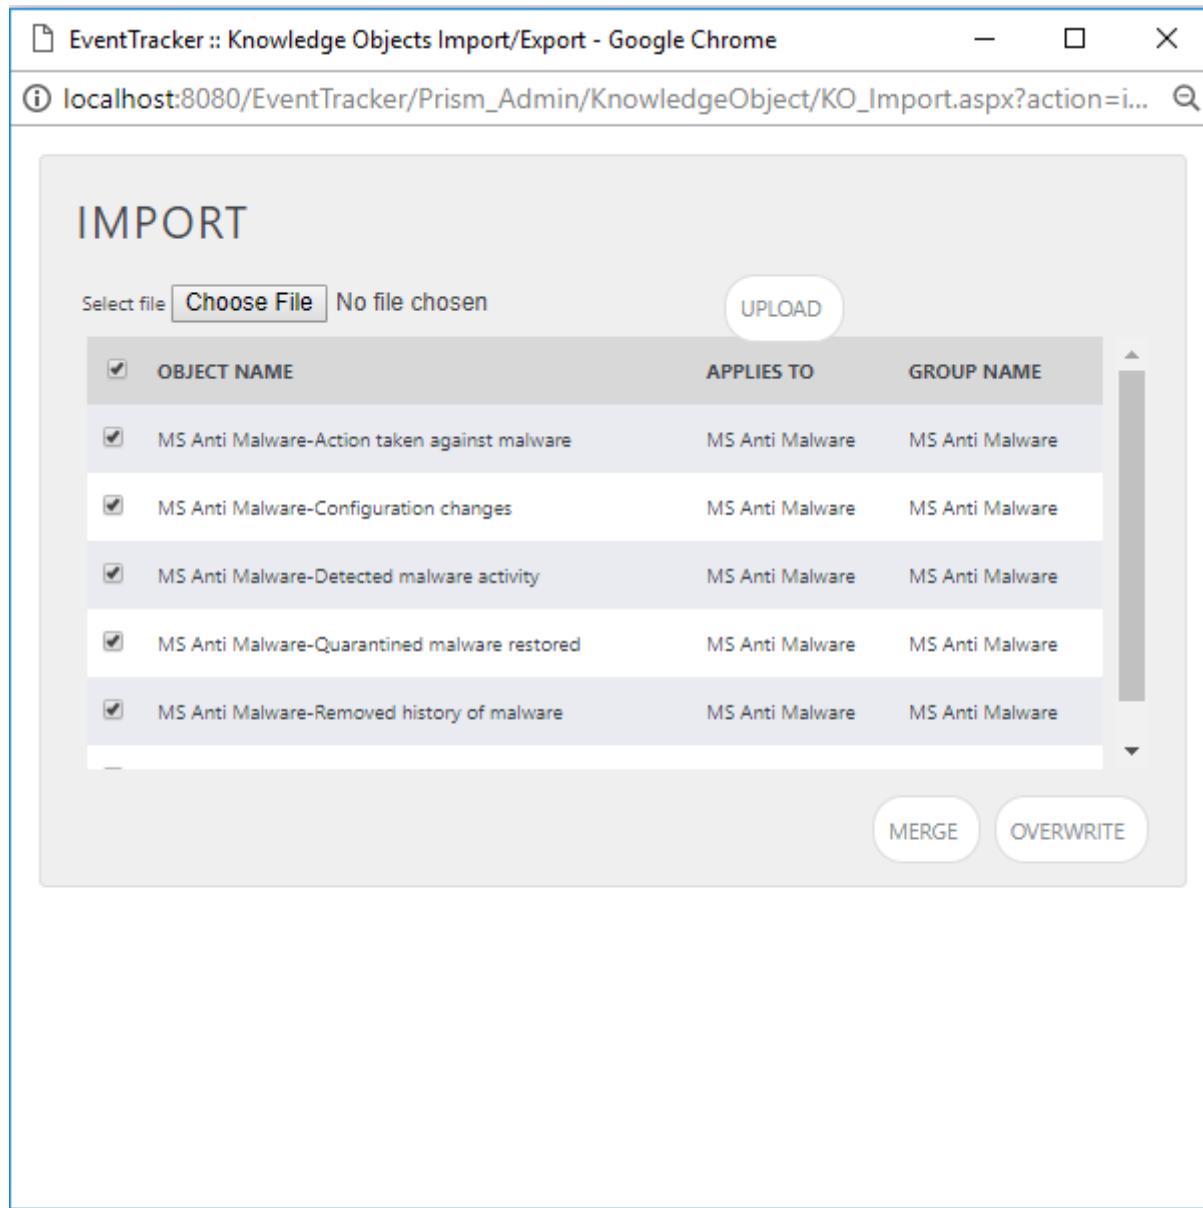

Figure 8

4. Knowledge objects are now imported successfully.

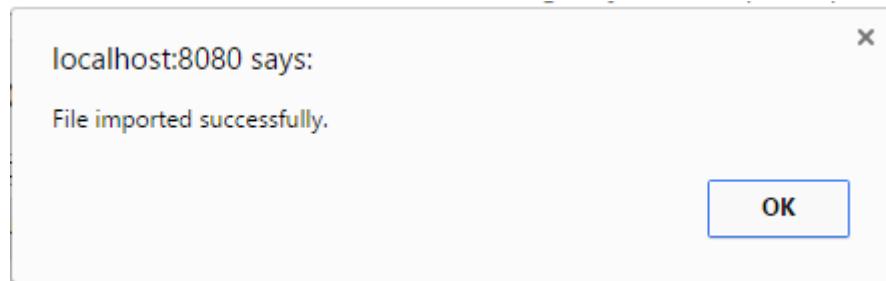

Figure 9

Flex Reports

1. Click **Reports** option, and then click the browse  button.
2. Locate the **MS Antimalware reports.etcrx** file, and then click the **Open** button.

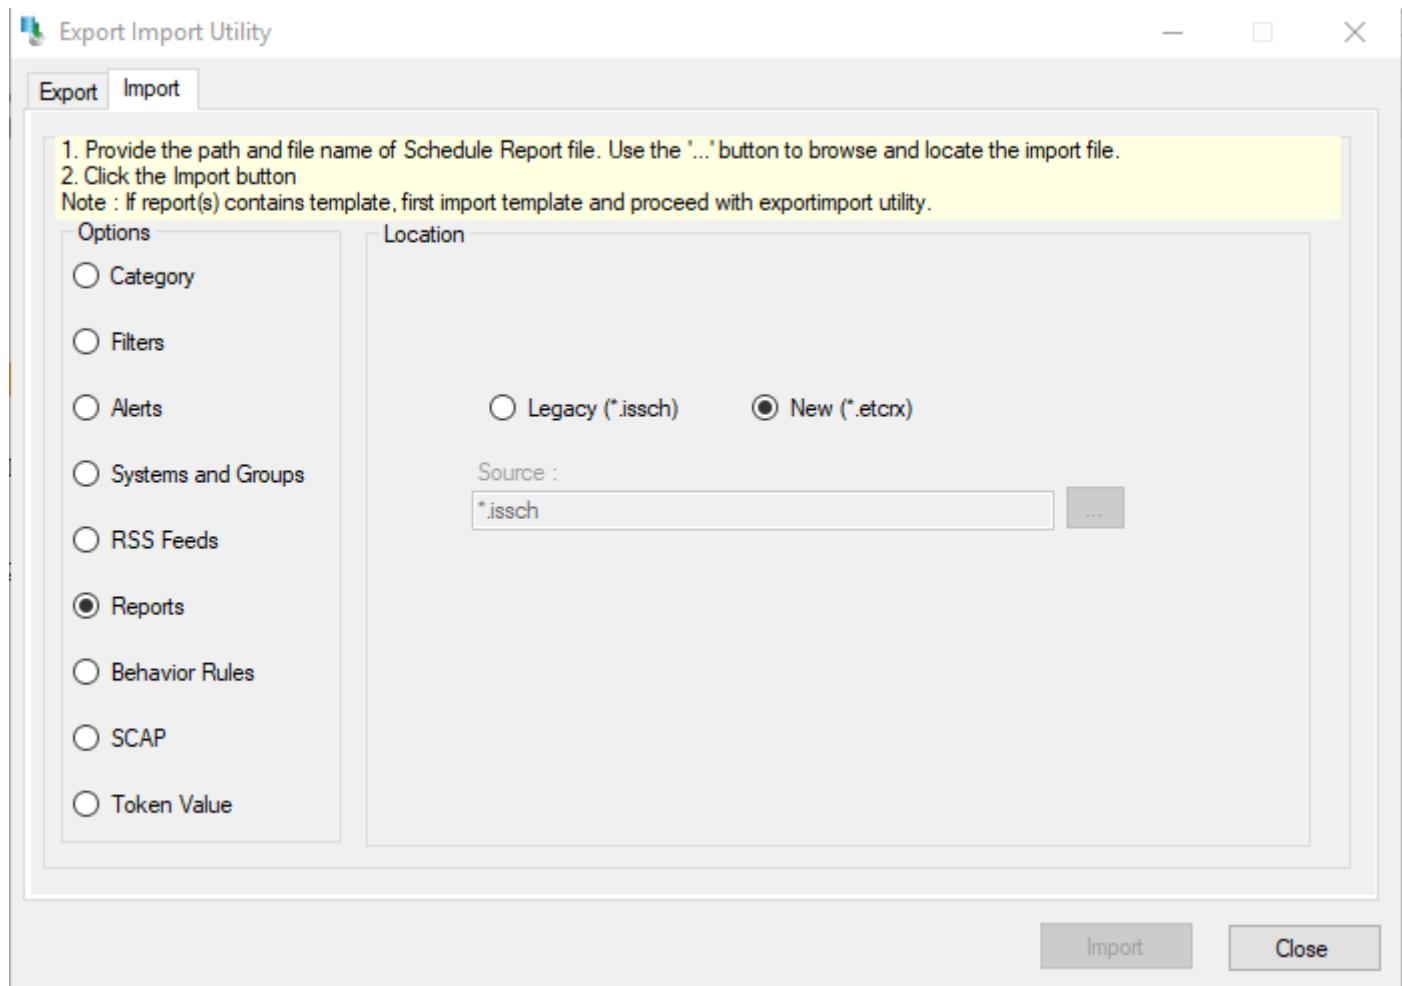

Figure 10

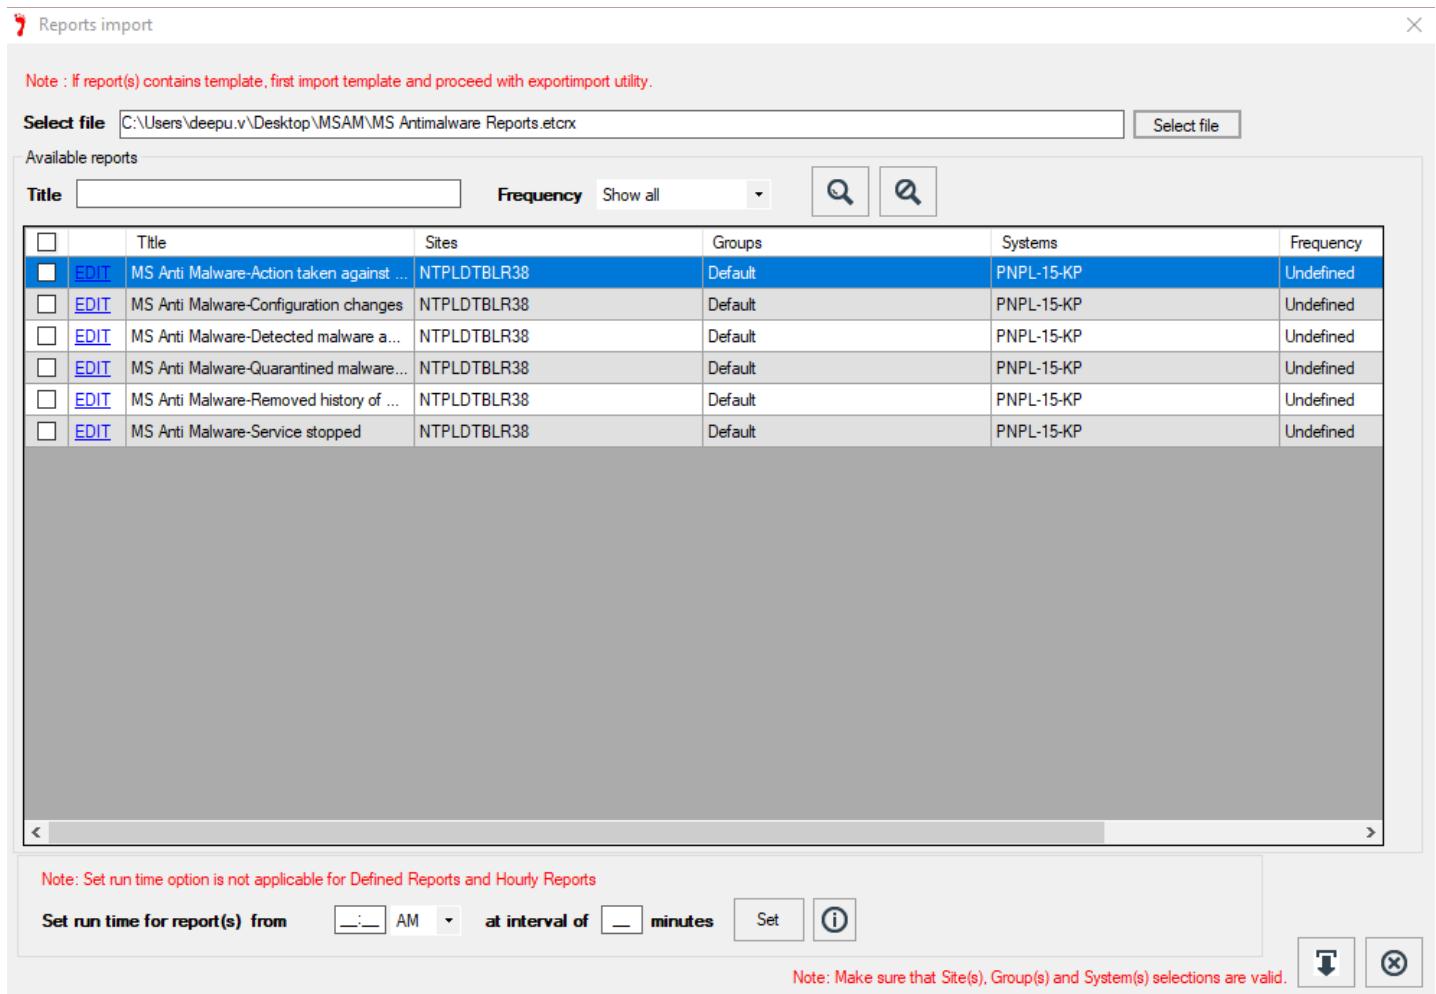

Figure 11

3. Click the **Import** button to import the **scheduled** reports. EventTracker displays success message.

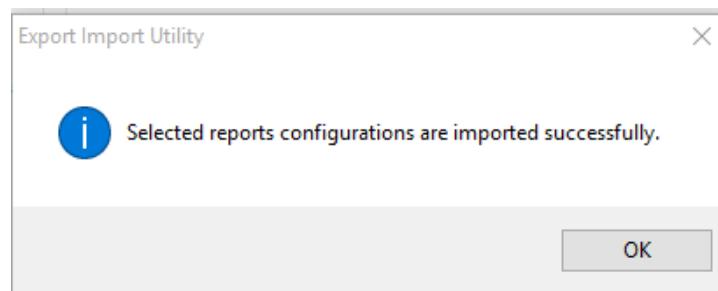

Figure 12

Parsing Rule

1. Click **Token Value** option, and then click the browse  button.

2. Locate the **MS Antimalware Token Value.istoken** file, and then click the **Open** button.

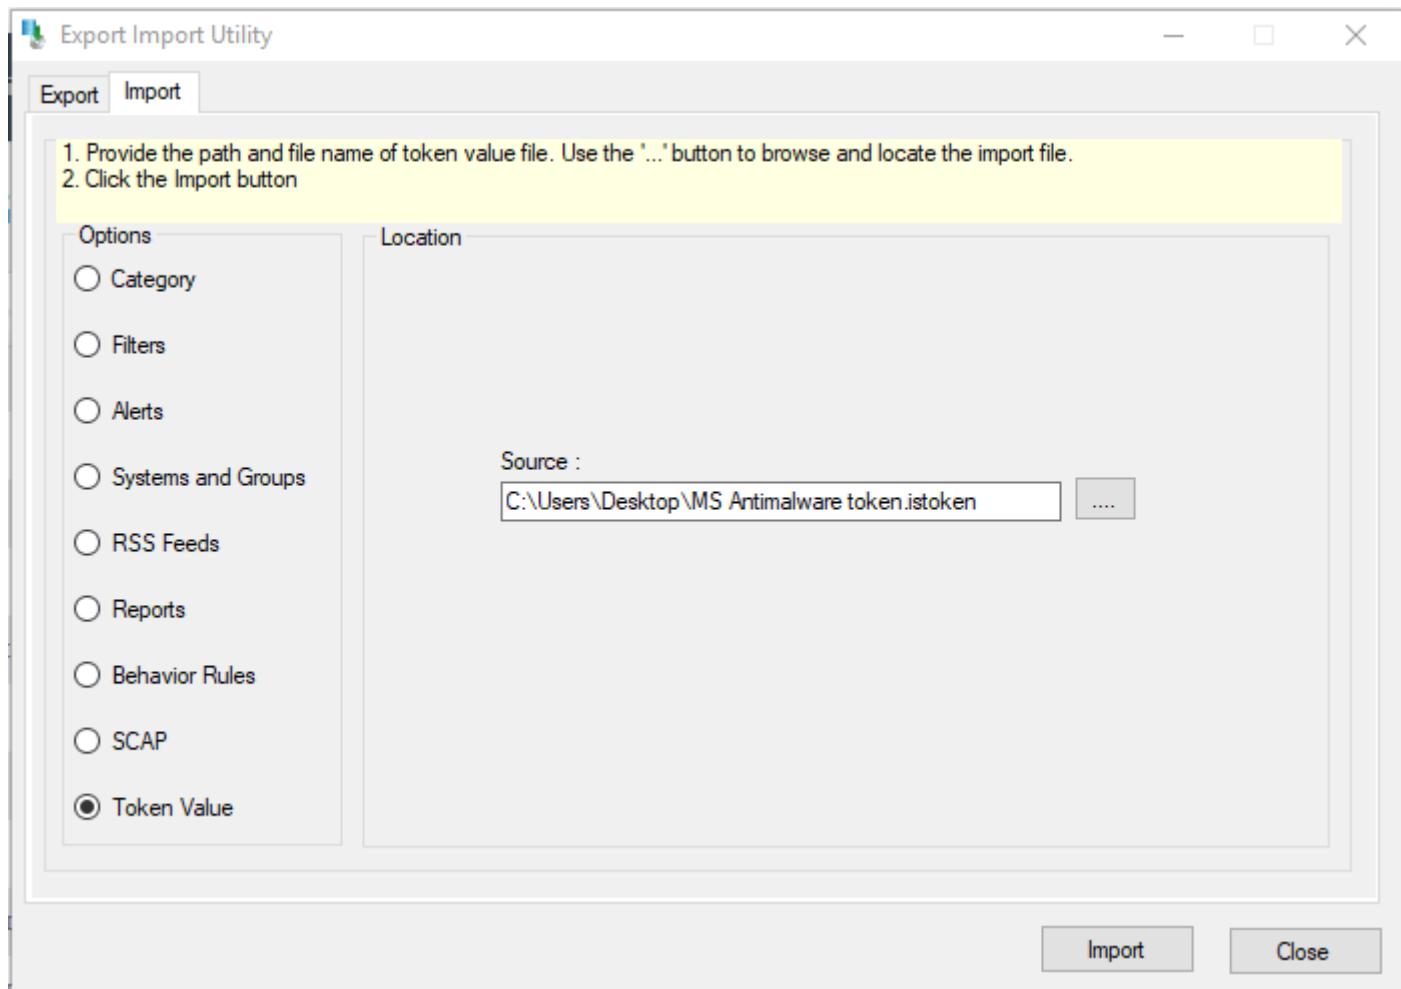

Figure 13

4. Click the **Import** button to import the tokens. EventTracker displays success message.

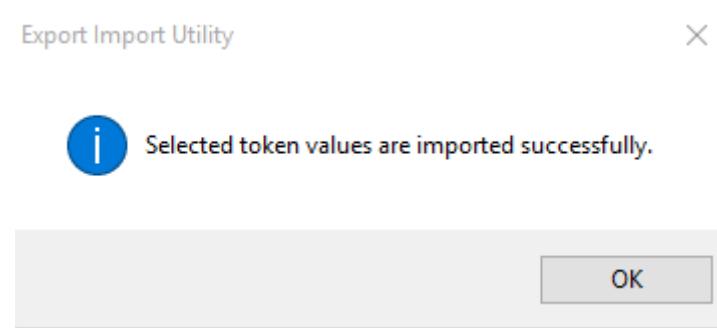

Figure 14

Verify MS Antimalware knowledge pack in EventTracker

Alerts

1. In the **EventTracker Enterprise** web interface, click the **Admin** dropdown, and then click **Alerts**.
2. In the **Search** field, type **MS Antimalware**, and then click **Go** button.
3. Alert Management page will display the imported **MS Antimalware** alert.

The screenshot shows the 'ALERT MANAGEMENT' page. At the top, there is a search bar with 'Search by Alert name' and a search term 'antimalware'. Below the search bar, there are buttons for 'Total: 4' and 'Page Size 25'. The main area displays a table with the following data:

<input type="checkbox"/>	<u>ALERT NAME</u>	THREAT	ACTIVE	E-MAIL	MESSAGE	RSS	FORWARD AS SNMP	FORWARD AS SYSLOG	REMEDIAL ACTION AT CONSOLE	REMEDIAL ACTION AT AGENT	APPLIES TO
<input type="checkbox"/>	MS Antimalware-Action taken against ...	<input checked="" type="checkbox"/> High	<input type="checkbox"/>	MS Anti Malware							
<input type="checkbox"/>	MS Antimalware-Detected malware acti...	<input checked="" type="checkbox"/> High	<input checked="" type="checkbox"/>	MS Anti Malware							
<input type="checkbox"/>	MS Antimalware-Quarantined malware ...	<input checked="" type="checkbox"/> High	<input type="checkbox"/>	MS Anti Malware							
<input type="checkbox"/>	MS Antimalware-Removed history of m...	<input checked="" type="checkbox"/> High	<input checked="" type="checkbox"/>	MS Anti Malware							

At the bottom left of the table, there is a 'DELETE' button. Above the table, there is a note: 'Click 'Activate Now' after making all changes' and a red circle around the 'Total: 4' button.

Figure 15

4. To activate the imported alerts, select the respective checkbox in the **Active** column. EventTracker displays message box.

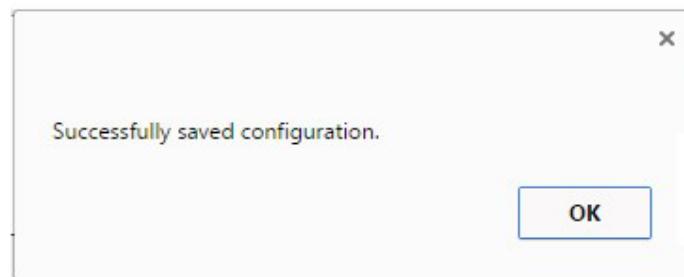

Figure 16

5. Click the **OK** button, and then click the **Activate now** button.

NOTE: You can select alert notification such as Beep, Email, and Message etc. For this, select the respective checkbox in the Alert management page, and then click the **Activate Now** button.

Flex Reports

1. In the **EventTracker Enterprise** web interface, click the **Reports** menu, and then select **Configuration**.
2. In **Reports Configuration** pane, select **Defined** option.
3. In search box enter '**MS Antimalware**', and then click the **Search** button.
EventTracker displays Flex reports of '**MS Antimalware**'

The screenshot shows the 'REPORT GROUPS' section on the left with a list of groups: Meraki Firewall, Microsoft Windows DF..., Microsoft Windows RR..., **MS Antimalware**, MSSQL, Mudra, MySQL, Nessus Vulnerability..., and Office 365. The 'MS Antimalware' group is highlighted with a red border. To its right is the 'REPORTS CONFIGURATION : MS ANTIMALWARE' section, which contains a table of six reports. Each report row has a small green gear icon and a link to the report details. The table has columns for TITLE, CREATED ON, and MODIFIED ON. A red box highlights the first report: 'MS Anti Malware-Removed history of malware'. The total count of reports is shown as 'Total: 6' in the top right corner of this section.

Persist data in Eventvault Explorer

Figure 21

- In next page, check column names to persist using **PERSIST** checkboxes beside them. Choose suitable **Retention period**.

REPORT WIZARD

TITLE: MS ANTI MALWARE-ACTION TAKEN AGAINST MALWARE ACTIVITY

DATA PERSIST DETAIL

Select columns to persist

Step 9 of 10

RETENTION SETTING

Retention period: 7 days (i)

Persist in database only (Reports will not be published and will only be stored in the respective database)

SELECT COLUMNS TO PERSIST

COLUMN NAME	PERSIST
Computer	<input checked="" type="checkbox"/>
Activity Type	<input checked="" type="checkbox"/>
Application ID	<input checked="" type="checkbox"/>
User Name	<input checked="" type="checkbox"/>
Source IP Address	<input checked="" type="checkbox"/>
Destination IP Address	<input checked="" type="checkbox"/>

Figure 22

8. Proceed to next step and click **Schedule** button.
9. Wait till the reports get generated.

Create Dashlets

1. Open **EventTracker Enterprise** in browser and logon.

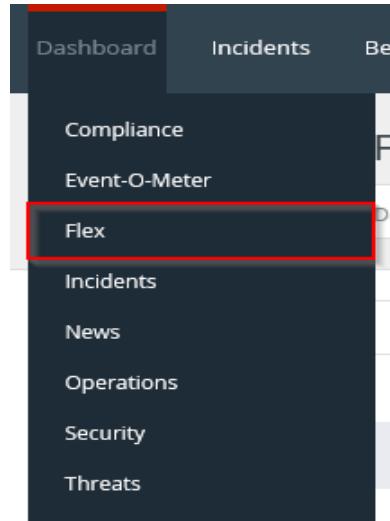

Figure 23

2. Navigate to **Dashboard>Flex**.

Flex Dashboard pane is shown.

A screenshot of a web browser displaying a configuration form for a 'FLEX DASHBOARD'. The title bar shows the URL as localhost:8080/EventTracker/CustomDashboard/AddEditDashboard.aspx?did=8. The main content area has a title 'Title' with the value 'MS Antimalware' and a description 'Description' with the value 'Microsoft Antimalware'. At the bottom are three buttons: 'SAVE', 'DELETE', and 'CANCEL'. The browser window has standard title bar elements like minimize, maximize, and close buttons.

Figure 24

3. Fill suitable title and description and click **Save** button.

4. Click to configure a new flex dashlet. Widget configuration pane is shown.

WIDGET CONFIGURATION

WIDGET TITLE: MS Anti Malware-Action taken against malware activity
